Pureftpd Manager For Mac Os X

Creating the ftp user To use puredb as your authentication method and to create virtual users, you must first create one ftp user in your system: Now create the user's home folder by typing mkdir /Users/ftpfolder, and set the ownership for it: If you leave the home folder like this, without copying the template /System/Library/User Template/English.

Read about the different options you have to build your pure-ftpd server To be able to create virtual users (users with no OS X accounts), compile it using --with-puredb.. lproj, the FTP user won't show in your login window with the rest of the users Let's give credit to the author of this hint for the previous steps.. cd into the pure-ftpd folder that was just created Before you compile it, take a look at the README file inside that folder and scroll down to ADVANCED COMPILATION.. Did you create a cool tool that you wish to share with others? It is very easy, just send me a mail with a description and a download link for your app and your software will be added to this list.. If the options sound too complicated, don't worry, just configure it using --with-everything, and you'll build a server with almost all available features. <u>VIc Media Player Software Free Download For Android Mobile</u>
